

Rear Person Lift

The Rear Person Lift is a lifting device designed to transfer a person from a wheelchair/scooter to the rear seat of a vehicle. The small dimensions of the product allow it to be easily installed into a wide range of vehicles, allowing for a sleek and neat finish.

Manual Transfer Plate

The Manual Transfer Plate is a simple aid which is designed to make boarding a vehicle from a wheelchair/scooter much more comfortable. The plate can be fitted to either the driver or passenger seat and fills the gap between the seat and the door, allowing for easy and seamless transfer. Once in the vehicle, the plate then swings up, taking up minimal space in the vehicle. A removable option is also available.

Electric Transfer Plate

The Electric Transfer Plate is designed to lift up wheelchair/scooter users into the vehicle. It is suitable for people who need assistance in getting from a seated position to standing or a sideways transfer between a wheelchair and car seat where there is a difference in height. The transfer plate is electrically operated and folds up neatly when not in use, which also allows non wheelchair users to board the vehicle with ease.

Also available:

Wheelchair Lift (side door)
Wheelchair Hoist (side door)

Electric Hatch Opener

The Electric Hatch Opener opens and closes your boot by simply pressing a button. It does not reduce boot storage space and comes with a dash mounted switch and a rear mounted boot switch. On most models you will be able to use the vehicle's key fob and if this is not possible, then an optional remote control can be supplied.

Lehmdis 10 Way Secondary Remote Control

If you have limited movement in your upper body, this control will bring everything to your fingertips. It will enable you to manage certain vehicle functions such as indicators, horn, lights and wipers.

Over/Under Ring Accelerator

The Over/Under Ring Accelerator transfers the acceleration from the pedal to a specially designed ring fitted above/below the steering wheel. This can be used with one or both hands, enabling full control of the steering wheel. Can also be used in conjunction with a push brake.

Thumb Touch Accelerator

If you have limited use in your lower body the Thumb Touch could be the answer. This can be used with your left or right thumb and also allows freedom to move your hand whilst driving. Can be used in conjunction with a push brake.

Twist Grip Accelerator

This accelerator is simple to use, just twist the handle (as on a bike or scooter) and away you go. Can be combined with a push brake. Optional 7 function mini keypad available.

Twin Lever Column Accelerator

Ideal for users who have limited strength and movement in their arms and limited or no use of their lower body. Two levers fitted to either side of the steering wheel in a position of your choice, simply push down on any of the levers to accelerate. This can be used in conjunction with a push brake.

Electronic Left Foot Accelerator (Quick Release)

If you are not able to accelerate or brake with your right foot, then the Electronic Left Foot Accelerator could be the answer. Fitted to the left of the brake, this operates via a dash mounted switch to enable you to choose between left and right accelerator. This can be easily removed if required.

Floor Mounted Left Foot Pedal Transfer

Fitted on the driver's side, this device transfers the operation of the accelerator pedal to the left of the brake. Can be removed easily when not required.

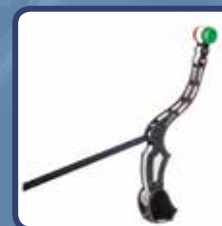

The New BAS Push/Pull Brake/Accelerator

If you are unable to use the foot pedals in your vehicle, then the new BAS Push/Pull Brake/Accelerator is the ideal adaptation for you. The adaptation is seat mounted and runs along the inside door sill. A range of handles and handle bars are available, as well as an optional

indicator switch. An electronic accelerator option is also available. Special features of this product; no cutting of the vehicle's trim or components, full movement of the steering wheel and no interference with the driver's airbag. With this product BAS have created a new design concept, where customer safety is never compromised!

Left Handed Brake/Accelerator

If you are unable to use the foot pedals in your vehicle this adaptation is ideal. It is fitted on the left hand side of the steering wheel. Manual and electronic options available.

Handylift Person Hoist (110kg)

Ideal if you have limited movement. A simple and easy way to transfer to and from the vehicle from your wheelchair.
