

SCOOZY

Functional design

The Scoozy has semi-independent suspension and an ergonomically shaped seat for advanced comfort. Increased functionality with armrests that open for easy access whilst providing full weight support for the user during entry and exit.

Customise with accessories

Easily expand your Scoozy with well thought-out accessories including a phone holder or front basket.

Contemporary mobility

Simple control system with striking design, innovative electric drive technology and smart functions.

Enhanced safety features

Increased visibility due to the high-placed LED lighting to make sure you can get to where you need to go safely. The display always shows the status of your range in kilometres for worry-free mobility. The active brake provides control and real active safety whilst speed sensitive steering protects you against making too sharp a turn at higher speeds.

Joystick control

The control system with the joystick together with the 4 large wheels and steering angle limiter ensure that you can drive with control and confidence, wherever you go. Available on the left or right side.

Go further

Scoozy utilises the latest technology so it can tackle a variety of terrains both on and off road. The lithium-ion battery has a long lifespan to ensure you get the most out of your chair with a regenerative braking system that gives you an even greater range of up to 100 km.
